Pool Alarm - Closed Loop

- Exceeds operational requirements of Model Barrier codes
- Microprocessor Controlled
- Monitors entry to Pool and Spa areas
- Instant on or 7 second delay models available
- Surface or flush mount models
- 15 second adult shunt
- Optional A or C form relay output upon request
- Built-in back-up battery capable
- Must be hard wired to remote 12 volt maximum 500 mA source or to plug in power source. Applied voltage must not exceed 15 VDC. Battery for backup only.

POOL ALARM

- Exceeds Operational Requirements of Model Barrier Codes
- Microprocessor Controlled
- Monitors Entry to Pool and Spa Areas
- Instant On Or 7 Second Delay Models Available
- Surface or Flush Mount Models
- 15 Second Adult Shunt
- Optional A or C Form Relay Output Upon Request
- Built-in Back-up Battery Capable
- Must Be Hard Wired To Remote 12 Volt Maximum 500 mA Source or To Plug In Power Source. Applied Voltage Must Not Exceed 15 VDC. Battery for Backup Only.

The new GRI DOOR ALERT/POOL ALARM was designed as an aid for prevention of an unattended access to a pool/spa area by a small child. Monitoring all doors or windows with CLOSED LOOP magnetic reed switches, the DOOR ALERT/POOL ALARM will sound an alarm should anyone too small to manage the adult pass thru feature attempt access to the pool/spa area. For maximum protection all moveable openings should be protected in such a manner by the GRI DOOR ALERT/POOL ALARM.

The 289N-1, 289N-2, 289N-3 and 289N-4 can be operated with an on-board 9 volt battery with a 12 volt externally supplied DC power source, in which case the battery will perform a back-up function should the externally supplied source fail for any reason. Both power sources have been designed to maintain a maximum sound pressure level. Should the battery voltage drop below 7 volts while in backup mode, a low battery mode will be initiated and the unit will sound 2 beeps approximately every 3 seconds for one to two weeks prior to total battery failure. Battery must be replaced at this time.

It is suggested that some type of surge protection, such as the GRI CS-1 Current Sensor, be used between the power supply and all GRI Pool Alarms using external power.

NOTE: Unit will function at minimum 5VDC at a very limited sounder volume. This power level is considered total battery failure.

WARNING: THIS IS NOT A LIFE SAVING DEVICE.
INSTALLATION INSTRUCTIONS:
The GRI DOOR ALERT/POOL ALARM mounts easily to the wall by any door or window which allows access to the pool/spa area. Using an CLOSED LOOP magnetic reed switch, the unit will detect and announce an open access by sounding a loud continuous alarm. Two timed options are offered: A maximum seven (7) second delay mode prior to sounding upon door opening, or an instant alarm sounding upon activation. A surface mount and a recessed mount model are offered in both time options for a total of 4 different versions. All versions incorporate a built-in pass thru feature and deactivation button to allow adult access without alarm sounding. Although the DOOR ALERT/POOL ALARM cannot be turned off, this feature will simply deactivate the alarm function for a maximum of fifteen (15) seconds. During this time span the adult must exit and close the door before alarm sounds. Once the alarm is sounding it can not be silenced by simply closing the door. The deactivation button must also be depressed. The sounder cannot be disabled by holding down the deactivation button.

If a screen is present on the opening giving access to the pool, a second CLOSED LOOP switch should be mounted on it and both switches wired in parallel. This configuration will allow the door to be open for ventilation since the unit will activate only when both the screen and the door or window are opened.

If multiple openings lead to the area, the GRI DOOR ALERT/POOL ALARM can monitor all by installing CLOSED LOOP switches which are wired in series. In this way, any opening will be detected by the GRI DOOR ALERT/POOL ALARM. A single deactivation button can also be wired at each opening to utilize the pass thru feature. Additional remote sounders may be wired in to extend sounder coverage. Please contact your local GRI Distributor for information on remote options. Part numbers and wiring diagrams are available from the factory.

WARRANTY:
One year warranty against workmanship, material and factory defects.
PRODUCT DESCRIPTION FOR THE
DOOR ALERT/POOL ALARM
Models 289N-1, 289N-2, 289N-3 and 289N-4
Type SM Signaling Device

APPLICATION:
The GRI DOOR ALERT/POOL ALARM is designed as an aid to detect
unsupervised access to a pool/spa area by a small child. Monitoring all
doors and windows with magnetic reed switches the DOOR ALERT/POOL
ALARM will sound an alarm should anyone too small to manage the adult
pass through feature attempt access to the pool/spa area. For maximum
protection all moveable openings should be protected in such a manner
by the GRI DOOR ALERT/POOL ALARM.

DESCRIPTION:
The GRI DOOR ALERT/POOL ALARM uses a microprocessor to monitor
the CLOSED LOOP magnetic reed switches, shunt/cancel button, battery
and power supply voltages, and to provide the timing options. The re-
cessed versions are designed to fit inside a single gang utility box, while
the surface mount versions may easily be mounted to the wall of any
structure.

289N-1 and 289N-2 versions offer a seven second delay in which an
adult may open the protected door, shut it, and then press the shunt/
cancel button without the alarm sounding.

289N-3 and 289N-4 versions alarm instantly if the protected door is
open before the shunt/cancel button is pressed.

All versions must be operated with a 12 volt externally supplied DC power
source. An onboard 9 volt battery can be used, in which case the battery
will perform a backup function should the externally supplied source fail
for any reason. The GRI DOOR ALERT/POOL ALARM is designed to
maintain a minimum sound pressure level.

MODEL NUMBER AND VERSION
289N-1 Recessed Door Alert/Pool Alarm 7 Second Delay
289N-2 Surface Mount Door Alert/Pool Alarm 7 Second Delay
289N-3 Recessed Door Alert/Pool Alarm Instant On
289N-4 Surface Mount Door Alert/Pool Alarm Instant On

It is suggested that some type of surge protection, such as the GRI CS-1
Current Sensor, be used between the power supply and all GRI Pool Alarms
using external power.

NOTE: Unit will function at minimum 5VDC at a very limited sounder vol-
ume. This power level is considered total battery failure.

SPECIFICATIONS:
- Battery Type: Standard 9 Volt
- Battery Life: Approximately 2 weeks
- External Power Supply: 12V DC 500 mA Output
  - Applied Voltage must not exceed 15 Volts DC
- Low Bat Mode: 7V DC
- Mounting Height: Ref. Local Code
- Sounder Rated: 85 dB at 10 Ft. (3.5 M)
- Switch: Closed Loop

WARRANTY: One year against workmanship, material and factory defects.

DISCLAIMER
The G.R.I. Door Alert/Pool Alarm is not a life saving device. Its’ intent
is to serve strictly as a monitoring device on doors and windows to
help prevent unattended access to pool and spa areas.

5/23/2007
A) Installing the Door Sensor

NOTE: Closed Loop Switch Required.

The GRI DOOR ALERT/POOL ALARM uses CLOSED LOOP (normally open) magnetic reed switches. Install the magnetic reed switch on the door according to the manufacturer's installation instructions. If there is a screen door, a switch should be installed on it as well. The switches should be connected in parallel as in Figure 1. In this configuration the DOOR ALERT/POOL ALARM will only activate if both doors are open. Next run the wires from the switch(es) to where the DOOR ALERT/POOL ALARM will be located on the wall.

B) Installing the DOOR ALERT/POOL ALARM

NOTE: The DOOR ALERT/POOL ALARM must be mounted as per local code or regulations.

SURFACE MOUNT VERSION:
Remove the DOOR ALERT/POOL ALARM from the surface mount case. Knockouts are provided on this case for wire access. Attach the surface mount case directly to the wall or existing fixture, or it may be mounted to cover a single gang electrical box. Attach the wires from door switch to terminal TM1 pins 2 and 5. It does not matter which wire goes in which location. Using an external 12 volt DC supply, run the wires from the power source to the alarm unit and attach the positive voltage to pin 1 and ground to pin 2 of terminal TM1. If battery backup is desired, connect a standard 9 volt battery. The alarm will beep twice during power up indicating a successful diagnostics test. Lay the battery in the bottom of the case and reassemble the DOOR ALERT/POOL ALARM with the button on the bottom and the sounder on top. Secure with the two screws provided.

RECESSED VERSION:
The recessed version of the DOOR ALERT/POOL ALARM is designed to fit in a single gang utility box. Run the wires from the door sensor switch(es) into the utility box. Attach the wires to terminal TM1 pins 2 and 5. It does not matter which wire goes in which location. Using an external 12 volt DC supply, run the wires from the power source to the alarm unit and attach the positive voltage to pin 1 and ground to pin 2 of terminal TM1. If battery backup is desired, install a standard 9 volt battery on the back of the DOOR ALERT/POOL ALARM. The alarm will beep twice during power up indicating a successful diagnostics test. Finally, insert the DOOR ALERT/POOL ALARM into the utility box with the button on the bottom and the sounder on top. Secure with the two screws provided.

PERTAINS TO SURFACE MOUNT AND RECESSED:
To maintain maximum sounder volume, a low battery mode will be initiated. Should the voltage drop below 7 volts the low battery mode will be triggered and the unit will sound 2 beeps approximately every 3 seconds for one to two weeks prior to total battery failure. The battery must be replaced at this time and the cause of power failure determined and restored.

When the alarm is sounding, it can only be turned off by pressing the shunt/cancel button. If the door is still open 15 seconds after the button is pressed, the alarm will sound again and continue until the door is closed and the button is pressed.

WIRING SPECIFICATION:
For connection of optional remote equipment and door contact switches a Belden CAT5 CL2 or equivalent cable is recommended. For the connection of the 12 volt power supply to the alarm unit a Belden 18-2 CL2-CMR 300v 60ºC or equivalent wire is recommended. In all cases installer should reference current local N.E.C. code, and/or code requirements set forth by local housing authority or code enforcement jurisdiction.

RECOMMENDED SYSTEMS TESTING:
Periodic system testing shall be performed on a weekly basis, and should incorporate operation of each door and window covered by the system, to confirm an alarm sounding at each opening. Installation of on-board battery as redundant power source shall necessitate this testing is performed with primary power source disconnected. In all cases battery should be replaced on a regular basis of every 80 to 90 days.
JP1 Jumper Positions

Note that position 1 is closest to Sounder.

**Position 1**  No Jumper, Instant On. With Jumper, 7 Second Delay.

**Position 2**  No Jumper, 15 Second Shunt. With Jumper, 7 Second Shunt.

**Position 3**  No Jumper, Aux/Relay Follows Alarm. With Jumper, Aux/Relay Follows Door.

Aux Output TM1-7 Is Grounded When On. 400 mA Maximum Current.

Select Desired Setting And Restore Power To Save

PLEASE NOTE: Always reference local codes and / or regulations concerning installation of the G.R.I. Pool Alarms. Some state and area building codes do not accept seven second delay units.
