

Series 9000 Keyboards

9000

The 56-key model 9056 and the 62-key model 9062 offer greater versatility and more options than have been previously available. The 9056 and 9062 keyboards are economically priced and delivery is "off-the-shelf."

These expanded typewriter-style, low cost, full ASCII keyboards provide the most requested features in a modern, straight-forward design. The heart of the 9000 series keyboards is a micro-controller. This allows high throughput with either customer specified two-key lockout or N-key rollover and baud rates from 150 to 19200.

Interface options are serial RS-232, TTL/RS-422, 20-mA. current loop, parallel or any combination of these. Auto repeat is available, as is either positive or negative logic output. These versatile keyboards can also be specified to incorporate components to meet MIL-spec 883B requirements.
