

The Directional Tool enables you to hold, control and guide flexible shaft drill bits and extensions into wall cavities and other confined spaces. Place the tool over your flexible drill bit shaft and arc your bit into the proper angle before drilling your hole. Made of hardened 1/4" steel and welded construction, our directional tool is finished with a durable powder coating for years of reliable, trouble free service.

Provides leverage and control with flexible bits & extensions!

Drill bit not included.

This tool is recommended when using any of our flexible drill bits or drill bit extensions!
