

Hands and Fingers Tools

The Magnetic Finger

A powerful magnet on your fingertip allows you to hold or retrieve small ferrous (contains iron) metal objects with precise control.

- Retrieve hard to hold items
- Fasten bolts in tight spaces
- Safely hold a nail in place
- Stretches but fits snugly for either hand, finger or size
- Incredibly versatile for multiple usage

This handy little glove will pick up nuts, bolts, washers, screws, nails, needles and many other ferrus metals. *(Will not pick up aluminum, copper, silver, brass and lead, just to name a few.)*

Perfect for using around the home, home repair and installation, electrical, plumbing, automotive and even crafts!

Useful to keep one in your toolbox, on your workbench, in the kitchen drawer, glove compartment, desk and even fits into a wallet or purse.

Many of our wire running, pushing and pulling tips and accessories are made of ferrus materials. Which means that when you drop a Creep-Zit™ lighted bullnose tip, a connector tip for the RoyRods™ system or even the wire loop for the Auto Noodle, you can easily pick them up with the Magnetic Finger.
