

# The Original Sling-A-Line™ Span Caster

**What started it all!**

## *Eliminates multiple ceiling tiles and ladder movements*

The Sling-A-Line™ is the first tool introduced in 1982 by Labor Saving Devices Inc. Other manufacturers have tried to imitate it, but none offer the versatility in range and the retro feel of the original. The Sling-A-Line has a beautiful birch wood yoke with a 10 lb. test fish line to accommodate most wire pulls. Simply depress the caster reel, pull back the surgical tubing strap with the lead weight and shoot. The sling-shot action allows you to vary your range from 10 ft. to over 100 ft. Attach your wire or a pull cord and reel it back to you.

### *How to use the Sling-A-Line™ in a drop ceiling situation:*

- Remove tile from false ceiling; aim the yolk of the Sling-A-Line holding it HORIZONTALLY. Push the button on the reel to release the line, put the weight in the leather sling and shoot.
- At the other end, attach your wire to a length of pull cord, tie the pull cord to the lead weight and reel it back.
- In areas where cable cannot be resting on the ceiling tiles, attach approved hanger above the drop ceiling to receive your cable.
- NOTE: Do not remove the ceiling tile in the area you are shooting towards. The weight could drop through the opening and cause injury or property damage. If the line gets tangled over any object, pull the line very slowly with your hand to allow the weight to unravel itself.

DESCRIPTION	PART NO.	MODEL
Sling-A-Line Span Caster	LS-85-202	SAL202
