

## Vision

### Wall-Eye™ Mini

Retrofit wire and cable installation is challenging. Depending upon the building structure, the geography and that date of construction, the building codes, materials used and construction standards may differ drastically. Furthermore, supposedly “consistent” modern construction techniques may present surprises inside the walls. Things like fire blocks, PVC conduits and plumbing, insulation, metal studs, existing wires and potential non-code modifications can make a retrofit installation a nightmare. Running wire in new construction is so much easier when you can see where you need to go and what lies in your path. Why not see your path in retrofit as well?

- This compact hand-held periscope viewer and flashlight enable you to see inside dark and confined wall cavities or ceilings through any 3/4” access hole.
- Used to view obstacles inside walls such as fire blocks, top or bottom plates, conduit, plumbing, existing wire, studs and debris before you commit to drilling your retrofit wire path.
- Compact and made of durable ABS plastic. Comes with a handy pocket clip and will fit easily into your pocket.
